- "*Designing a Consensus Mechanism for Blockchain Cross-chain Applications*", submitted to IET blockchain – Wiley, rejected for being fake (AI-generated).

- "*Structuring authenticity: blockchain, AI, and the transformation of online integrity*", submitted to JeDeM, about their application on social media, accepted with major revision (title is changed to reflect the content: "*Proof of genuine engagement: blockchain and the neo-slacktivism problem*"), only minor revisions remains.

- "*Cryptographic Chain-of-Custody for Last-Mile Parcel Delivery: A Blockchain–IoT System Architecture with Discrete-Event Simulation Evaluation*", submitted to IET blockchain – Wiley, accepted with significant revision, minor revision, then accepted for publication.

- "*Securing State Revenue Through Blockchain: The Mediating Role of Perceived Trust in Telecommunications IT Governance*", submitted to JeDeM, major revision or resubmit (rejected 2nd round review because the paper is mainly about testing public perception; i.e., not about blockchains design or technicalities).

- "*Design of a Blockchain-Based Framework for Digital Copyright Protection and Tamper Prevention*", submitted to IET blockchain – Wiley, major revision.

(My name does not appear because only the main supervisor is listed and the thesis was in another faculty, Engineering, than the one I was working in. However, you can see from the paper in 15 that I've participated in the thesis; the thesis resulted in one paper only, but it was a stronger paper that was accepted in IEEE and was eventually published in a journal).

(I was not closely involved with the scientific contribution of this thesis; I've only participated in the writing guidance and review process. In fact, I joined the supervision to solve a procedural problem and resigned before the final debate)
